

INFORMATION SHEET

Interactive Projector.

The Interactive Classroom is now the norm when it comes to teaching. Technology which is installed for the classroom should be used to enhance the teaching environment and make the classroom a servant to the technology. Bendigo Audio Visual aim to supply and install the best technology to suit your schools needs, without costing you the world.

Epson has a range of short throw and ultra short throw projectors including the EB-450Wi. The Epson interactive projector uses an infrared pen which transmits between the projector to show where the mouse point is on the projected image.

Because the EB-450Wi is a ultra short throw projector the projected light will not shine into your eyes when teaching or using the whiteboard unlike conventional data projector and interactive whiteboard set ups.

Epson's interactive projector no longer needs a specialised board so you get to choose the screen size and height which is most suitable, to your teaching requirements. Interactive image sizes can range from 59" up to 96" diagonal when using native WXGA resolution.

More cost effective than a IWB system.
 Very easy to install which reduces the installation cost.

Works with existing standard whiteboards.

Works with PC and MAC.

Less system parts to break down.

Ultra Short Throw Projector which reduces light shining in users eyes and shadows on the board surface.
