

INFORMATION SHEET

Easy to use projector controller.

Introducing a simple and easy to use projector controller that replaces the need for remote controls which often become lost, broken or stolen. The *JED AV System Controller* for projectors and Plasma/LCD display screens, enables end users to quickly and simply use the installed system in your venue with ease, leaving more time to focus on the presentation.

The *JED AV System Controller* connects to your installed projector using a data cable which allows RS232 communication between the controller and projector. When a user of the system presses the On/Source button, a code is sent to the projector which is effectively the same as pressing the power button on the projector case.

The LCD display on the system controller shows you exactly what stage the projector is at without leaving you guessing if the system is warming up or set to the correct input.

The *JED AV System Controller* also comes with a *Freeze On/Off* and *Mute On/Off* option which is ideal for places of worship or in the class room when you want to get a new slide or presentation ready, without showing your computer screen to the audience. The *Volume Up* and *Volume Down* model easily enables the end user to turn the master volume of the projector or display screen volume up or down. The *LCD Screen* will also give feedback to what the volume is set to.

- ✓ Simple and easy to use.
- ✓ Front panel LCD explains what source the projector is on and other feedback.
- ✓ Energy efficient (Shuts down projector if user leaves room and forgets).
- ✓ Only needing four buttons to control everything.
- ✓ Made in Australia.
- ✗ No remote controls to lose.
- ✗ No expensive programming costs.
- ✗ No flat batteries, always ready to go!
